**PREREQUISITES:**

There is no subject that must be taught in advance in order to be taught

**COREQUISITES:**

There is no need to teach other subjects at the same time as teaching this subject

## **COURSE DESCRIPTION:**

The subject is taught to students of the Faculty of Dentistry the basics of the rapidly developing science of psychiatry in modern times. Psychiatry has its own system of research methods, diagnostic methods and various treatment tactics. Psychiatry consists of general psychopathology and special psychiatry. General psychopathology studies the characteristics and disorders of the mental spheres of perception, memory, intellect, thinking, emotion (sphere of impression), tendencies, attention, movement and thinking. The care of the mentally ill and the elimination of aggressive and autoaggressive (suicidal) forms of behavior of the mentally ill are of special importance in the subject taught.

The special psychiatry department focuses on the study of individual nosological units in accordance with the modern Classification of Mental Illness. Special attention is paid to the analysis of schizophrenia and schizoaffective disorders, affective disorders (depressive disorders, which are especially relevant for the modern era), organic diseases of the brain, including epilepsy. The diagnosis and treatment of psychoactive substances, including alcoholism and drug addiction, which are relevant to any society, were reflected in the curriculum of the subject. In recent years, special attention has been paid to the study of the clinic, diagnosis, treatment and prevention of stress-related mental disorders (psychogenesis, crises and emergencies), as well as concomitant mental disorders during other somatic diseases.

## **COURSE OBJECTIVES:**

To give students a complete picture of the existence of an independent scientific and practical basis for psychiatry, as well as prevention, early diagnosis of mental illness, indications and contraindications to the use of modern treatments and methods, organization of psychiatric and psychosocial rehabilitation services, timely referral of psychiatrists to psychiatrists . Functional significance of the anatomical structures of the brain.

## **COURSE RESULTS:**

Upon completion of the course, students should know the characteristics and disorders of the main mental spheres of mental activity, methods of examination of mental patients, gain basic knowledge about the clinic, diagnosis, treatment and prevention of major mental illnesses.

**NOTE:**

A minimum of 34 points must be scored during the semester and a minimum of 17 points in the exam. The scores obtained during and before the exam are summarized and the final amount is evaluated as follows:

- A - "Excellent" - 91 - 100
- B - "Very good" - 81 - 90
- C - "Good" - 71 - 80
- D - "Fair" - 61 - 70
- E - "Satisfactory" - 51 - 60
- F - "Failure" - less than 51 points

**ASSIGNMENT:**

There are 10 independent work assignments for the semester. Perform each task  
It is evaluated by 1 point.

Freelance work should be in written form, word file format, volume 1-2 pages (font 12).
