HEAD OF EDUCATIONAL SECTION: Mursalov Mazahir Mursal o.: 050-646-46-54

PREREQUISITES: For the learning of the subject, learning of anatomy, physiology, pathophysiology, pathological anatomy and general surgery are required.

COREQUISITES: There is no need to teach other subjects at the same time with teaching of this subject.

COURSE DESCRIPTION: In this course are studied the etiology, pathogenesis, clinical presentation, diagnosis and treatment of surgical diseases. In military and field surgery are studied the types of gunshot wounds, their diagnostics and treatment tactics. In addition, when studying the subject, the surgical diseases of all areas and organs of the body (head and neck regions, chest, abdominal cavity, extremities), as well as pathologies of cardio-respirator system, pathologies of the cardiovascular and nervous systems, their epidemiology, etiology, pathogenesis, clinical presentations and diagnostics, methods of treatment are

studied. On the subject of military-field surgery, the students are taught the features of gunshot wounds of various organs and systems of the body in modern battles, their severity, and diagnostic methods. The principles of use of instrumental and diagnostic equipment are studied, which play a role in the diagnosis of surgical diseases.

**THE PURPOSE OF LEARNING THE SUBJECT:** Preparation of university graduates as advanced physicians at the modern level, mastering their skills in the use of modern diagnostics and treatment, and training of highly qualified physicians for the organization of treatment of surgical diseases.

**THE RESULTS OF STUDYING SUBJECTS.** After completing the course on Surgical Diseases, students should be able to freely admit surgical patients, coordinate the results of objective and instrumental examinations, diagnose and should be able to direct the patients according to their profile.

**TOPICS OF SUBJECT:**

**For Surgical Diseases:**

Lecture topics:

1. Abdominal hernia
2. Appendicitis, complications
3. Gastroduodenal ulcer and complications. Gastric cancer
4. Surgical diseases of the small and large intestine
5. Diseases of the pancreas: pancreatitis, tumors, cysts, fistulas
6. Gallstone diseases, mechanical jaundice. Cholecystitis
7. Peritonitis
8. Surgical diseases of the liver.
9. Diseases of the thyroid gland
10. Diseases of the breast
11. Surgical diseases of the esophagus
12. Surgical diseases of the lungs
13. Obliterating diseases of the lower extremities
14. Acute abdomen
15. Surgical diseases of the pleura
16. Surgical diseases of the heart
17. Thrombosis and embolism
18. Diseases of peripheral veins, acute and chronic thrombophlebitis, flebotrombosis, postrombophlebitic syndrome, thromboembolism of the pulmonary arteries.
19. Preoperative methods of investigation of surgical diseases Risk Factors
20. Principles of preoperative preparations
21. Postoperative patient care
22. Postoperative complications
23. Antibiotocprophylaxis and antibiotic therapy in surgery
24. Infusion and transfusion therapy in surgery
25. CIRS (systemic inflammatory response syndrome), sepsis, septic shock
26. Surgical treatment of diabetes. Diagnostic and treatment tactics. Methods of surgical treatment. Obesity
27. Surgical endoscopy. Classification of endoscopic and laparoscopic surgeries. Indications: advantages and complications.

## 28. Traumatic lesions of the thoracic cavity

### **Topics of practical lessons:**

1. Acquaintance with the history of the disease. Abdominal hernia
2. Acute and chronic appendicitis
3. Gastroduodenal ulcer and complications.
4. Gastric cancer
5. Intestinal obstruction
6. Acute and chronic cholecystitis. Mechanical jaundice
7. Acute and chronic diseases of the pancreas
8. Hemorrhoids, anal fissura, cancer
9. Benign and malignant tumors of the colon
10. Peritonitis
11. Abscess and gangrene of the lung. Acute and chronic empyema of the pleura and lung cancer
12. Diseases of the esophagus (diverticulum, cardiospasm, burns, tumors)
13. Thrombosis and embolism
14. Diseases of the lower extremities veins
15. Obliterating diseases of the lower extremity arteries
16. Diseases of the thyroid gland
17. Diseases of the breast
18. Exinococcosis of the liver and lungs
19. Spleen: Splenomegaly. Spleen tumors. Spleen injuries
20. Chest: Defects of the chest wall. Infections (osteomyelitis, chondrite). Reconstruction of the defects. Tietze syndrome. Mondor disease. Tumors.
21. Diseases of the mediastinum
22. Heart: congenital heart defects. Stenotic anomalies. Pulmonary stenosis. Aortic stenosis. Ischemic diseases. Mitral valve anomaly. Abnormalities in blood flow to the lungs. Anomalies that reduce blood flow in the lungs
23. Arteries: diseases of the peripheral arteries. Atherosclerosis. Acute arterial blockage (thrombosis, embolism)
24. Vein and lymph vessels: diseases of peripheral veins. Thrombosis of deep and superficial veins. Their complications.
25. Postrombotic syndrome
26. Adrenal gland: Surgical diseases of the adrenal gland. Primary hyperaldosteronism. Feochromasitoma.
27. Organ transplantation
28. Abdominal trauma
29. Minimally invasive interventions in surgery
30. The tactics of treatment of a patient with sepsis
31. Shock
32. Assessment of critical condition, tactics of treatment
33. Acute abdomen
34. Abdominal and chest trauma
35. Diseases of thyroid gland
36. Dysphagia
37. Mechanical jaundice
38. Intraabdominal tumors

**Practical classes for IV year students**  
**Faculty of Medicine and Prevention (autumn, spring semester)**

No.	Theme name	Hours
1	Diseases of the esophagus: Methods of diagnostic examination. Types of treatment.	2
2	Achalasia. Gastroesophageal reflux disease (GERD). Barrett esophagitis. Hiatal hernia.	2
3	Perforation of the esophagus (spontaneous, iatrogenic). Foreign bodies of the esophagus.	2
4	Benign and malignant tumors of the esophagus.	2
5	Diagnostic examination of surgical diseases of the stomach, differential study	2
6	Complications of the stomach and duodenum 12. Perforation. Bleeding. Stenosis. Penetration. Malignancy. Stress ulcers (acute).	2
7	Benign and malignant tumors of the stomach.	2
8	Stomach diverticula, volvulus, bezoar. Diseases of the operated stomach.	2
9	Gastrointestinal bleeding.	2
10	Diagnosis of diseases of the small intestine.	2
11	Small intestinal obstruction.	2
12	Crohn's disease.	2
13	Benign and malignant tumors of the small intestine.	2
14	Diagnosis of diseases of the colon.	2
15	Ulcerative colitis.	2
16	Benign and malignant colon tumors.	2
17	Acute appendicitis.	2
18	Diagnosis of surgical diseases of the rectum.	2
19	Hemorrhoids, complications. Acute and chronic paraproctitis, pararectal fistulas.	2
20	Diagnosis of liver disease.	2
21	Cysts and abscesses of the liver.	2
22	Benign and malignant liver tumors.	2
23	Portal hypertension, varicose bleeding.	2
24	Acute calculous and stoneless cholecystitis.	2
25	Obstructive jaundice, choledocholithiasis, biliary tract structures, cholangitis.	2
26	Diagnostic methods for studying diseases of the pancreas.	2
27	Acute and chronic pancreatitis. Pancreas cysts.	2
28	Benign and malignant tumors of the pancreas.	2
30	Acute abdomen: diagnostic methods.	2
31	Stages of development of peritonitis (I, II, III). Intra-abdominal abscesses with diffuse and diffuse peritonitis.	2
32	Spleen, splenomegaly, hypersplenism, traumatic injuries of the spleen, abscesses.	2
33	Hernia of the anterior abdominal wall. Oblique, umbilical, femoral, white line hernia and rare types of hernias. Postoperative hernia. Classification.	2
34	Diaphragmatic hernia (paraesophageal, parasternal, retrosternal, pleuroperitoneal).	2
35	Diagnosis of bleeding from the lower digestive tract. Tactics for bleeding of the lower digestive tract. Test tasks for the program.	2
	<b>Total</b>	<b>70</b>

**Practical classes for IV year students of the Faculty of Stomatology  
(autumn semester)**

<b>No.</b>	<b>Theme name</b>	<b>Hours</b>
1	Hernias of the anterior abdominal wall. Oblique, umbilical, femoral, white line hernia and rare types of hernias. Postoperative hernia.	2
2	Diaphragmatic hernia (paraesophageal, parasternal, retrosternal, pleuroperitoneal).	2
3	Acute and chronic appendicitis: diagnosis.	2
4	Perforated stomach and duodenal ulcers.	2
5	Diseases of the small intestine: diagnosis.	2
6	Small bowel obstruction.	2
7	Crohn's disease.	2
8	Benign and malignant tumors of the small intestine.	2
9	Diagnosis of diseases of the colon.	2
10	Ulcerative colitis	2
11	Benign and malignant colon tumors.	2
12	Diagnosis of surgical diseases of the rectum.	2
13	Acute and chronic cholecystitis.	2
14	Obstructive jaundice.	2
15	Acute and chronic diseases of the pancreas.	2
16	Acute and chronic pancreatitis. Pancreatic cysts.	2

	<b>Total</b>	<b>35</b>

**Practical classes for IV year students of the Faculty of Stomatology  
(spring semester)**

<b>No.</b>	<b>Theme name</b>	<b>Hours</b>
1	Heart disease. Congenital and acquired heart defects.	2
2	Ischemic heart disease.	2
3	Pericarditis.	2
4	Abscess and gangrene of the lung.	2
5	Acute and chronic pleural empyema: Benign and malignant tumors.	2
6	Diseases of the thyroid gland: etiology, pathogenesis, clinical picture, diagnosis and treatment)	2
7	Hashimoto Riedel's goiter.	2
8	Thyroidites and strumites.	2
9	Diseases of the esophagus (diverticula, cardiospasm, tumors).	2
10	Burns of the esophagus. First aid. Doctor's tactics. Treatment.	2
11	Surgical liver diseases (cirrhosis, cysts).	2
12	Portal hypertension.	2
13	Echinococcosis. Echinococcosis of the liver.	2
14	Traumatic injury to the spleen.	2
15	Diseases of the breast: etiology, pathogenesis, clinical picture, diagnosis and treatment	2
16	Transplantology	2
17	Complications of stomach ulcers and 12 duodenal ulcers.	2

18	Gastroduodenal bleeding	2
19	Diseases of the pancreas: acute and chronic pancreatitis	2
20	Appendicitis.	2
21	Blunt abdominal trauma: etiology, pathogenesis, clinical picture, diagnosis and treatment	2
22	Peritonitis: etiology, pathogenesis, classification, clinical picture, diagnosis.	2
23	Basics of providing assistance to the wounded during battles	2
24	In case of bleeding accompanied by large blood loss from gunshot wounds. Assistance provided.	2
25	Traumatic shock and prolonged compression syndrome. Damage to surrounding organs and tissues with gunshot wounds, doctor's tactics.	2
26	Thermal damage. Assistance provided	2
27	Injury to the skull and brain	2
28	Open and closed injuries of the abdominal cavity. Open and closed chest injuries.	2
30	Obliterating diseases of the vessels of the lower extremities: etiology, clinical picture, diagnosis and treatment.	2
31	Obliterating diseases of the veins of the lower extremities: etiology, pathogenesis, clinical picture, diagnosis and treatment	2
32	Postthrombophlebitis syndrome	2
33	Test tasks according to the program	2
	<b>Total</b>	<b>65</b>

CONTENTS OF THE LECTURES ON SUBJECT: An electron version of the lectures on all subjects on the subject of Surgical Diseases is available in the section of the university website. The electronic version of the sample test questions is placed in the virtual test center of the University.

ASSESSMENT: Getting 100 points to earn a subject credit will be as follows:

50 points - up to the exam

Including:

10 points - course attendance

10 points - freelance work

30 points are the points you will earn from the lessons of curation.

There will be three colloquiums (minimum 3) during the semester. If you do not participate in the colloquium, the score will be 0 (zero) points.

50 points - will be collected on the exam.

The exam will be conducted by test method. The test will consist of 50 questions. Each question is 1 point.

Wrong answer questions will erase the scores of the questions answered correctly.

NOTE: If a minimum 17 points will not be collected, the points earned up to exam will not be summarized. The scores collected before and during the exam are summarized and the final score is evaluated as follows:

A - "Excellent" - 91-100

B - "Very good" - 81- 90

C - "Good" - 71- 80

D - "Enough" - 61-70

E - "Satisfactory" -51- 60

F - "Insufficient" - less than 51 points

NOTICE: 10 free work assignments are given during the semester. Performance of each task is estimated at 1 point.

A free work written Word file must contain 1-2 pages (12 fonts).

Plagiarism is unacceptable because each free work is a combination of a student's own ideas.

#### THE TOPICS OF THE FREE WORKS AND TIME OF FINAL DELIVERY

1. Abdominal hernia
2. Appendicitis, complications
3. Gastroduodenal ulcers and their complications
4. Malignant tumors of the large intestine
5. Acute pancreatitis
6. Acute Cholecystitis
7. Peritonitis
8. Exinococcus of the liver
9. Nodular toxic gouter
10. Tumors of the breast

Free works must be delivered before the end of the course. Subsequent filings will not be considered regardless of the reason for the free works.

The results of free work are recorded in the journal.
